## Decision Making (If - Else)

**Brandon Boyle** 

## What Are If Statements

- Decision making True, False
- If, Elif, Else
- Statement followed by a command
- Can be nested

## Examples

```
grade=int(input("Enter the grade: "))
if (grade>=90):
    print('A')
elif (grade>=80):
    print('B')
elif(grade>=70):
    print('C')
                          if (number%2==0):
elif(grade>=60):
                              if (number>10):
    print('D')
else:
                              else:
    print:('F')
                                  print("The number is even but less then 10")
```

else:

```
number=int(input("Enter a number: "))
        print("The number is even and more than 10")
```

print("The number is an odd number")

## **Applications**

Guess a number between 1 to 10: 6

You guessed correctly

Try again

```
prompt='Guess a number between 1 to 10: '
active=True
while active:
    number=int(input(prompt))
    if number==6:
        print('You guessed correctly')
        break
    else:
        print('Try again')
Guess a number between 1 to 10: 4
Try again
Guess a number between 1 to 10: 5
```

def maximum(a,b,c): if a>b and a>c: largest=a elif b>c: largest=b else: largest=c return largest maximum(34,123,311)
